

Photo Sharing App

OVERVIEW

The Photo Sharing App is a native iOS application designed to allow users to take snapshots with a comment and send it simultaneously to multiple selected platforms - storage locations, blogs, social media websites. The core app idea was to link all social network accounts in one application. The application uses standard APIs for integration with social media and blogs.

FEATURES

- taking a picture/video
- switching front/rear camera view
- setting the flash to on/off/auto
- using device's library
- multiple social networks selection
- photo/video/text delivery to multiple social networks

TOOLS AND TECHNOLOGIES

Xcode 7

OBJECTIVE-C

Social APIs
